CONTROL PANELS

AEROMAX NU-540

The **AeroMax™ Control System** is a simplified control system that monitors and displays airflow status via our single PressureFlow™ sensor - a specialized digital pressure transducer. The control panel also notifies lab workers with both audio and visual alarms if the unit's airflow pressure departs significantly from its set point. The user interface is operated through a series of buttons and LED indicators, which control the unit's blower, UV light, outlets, and single DC ECM motor.

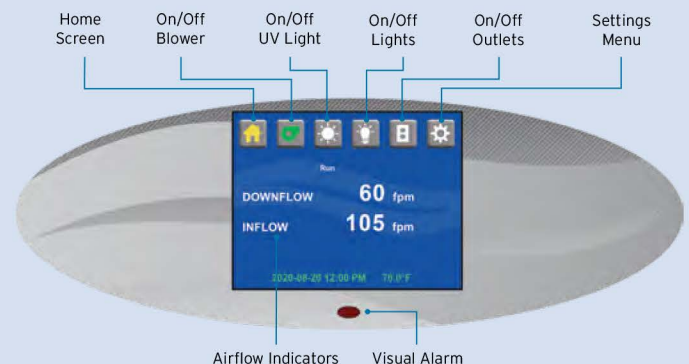

FLOWGARD NU-543

The **FlowGuard™ Control System** integrates one dual thermistor airflow sensor (IntelliFlow™) to constantly monitor the biosafety cabinet's airflow performance. The FlowGuard™ control system also integrates an ultra-high efficiency motor/blower that provides automatic compensation for both filter loading and variances in the line voltage. The user interface is operated through a series of buttons and a small on board screen, which controls the motor blowers, work zone lighting, optional UV lights, unit outlet(s), audio/visual alarms.

TOUCHLINK NU-545

The **TouchLink™ LCD Touchscreen Control Center** utilizes dual thermistor airflow sensors (IntelliFlow™) that precisely monitor the biosafety cabinet's airflow performance and provide real-time airflow measurements. However, in the case of Type B1 & B2 cabinets, the control center integrates one airflow sensor for the downflow and a digital differential velocity pressure flow grid for the exhausted portion of the BSC. TouchLink™ also simplifies BSC maintenance by providing detailed diagnostics. Step-by-step decontamination procedures can also be controlled via the on board control center. TouchLink™ can even warm up the blower motor before you arrive and set all lights on a customizable schedule.
